ACCCA APPROVED PLANT LIST - FRONT YARD

Sorted alphabetically by plant type (accent, ground cover, shrubs, trees). An alphabetical listing sorted by common names and a listing sorted by botanical names are listed online in the Documents section of the ACCCA website, www.onlineat anthem.com/accca-documents-forms.

The ACCCA Approved Plant List was developed by the developer and applies to residential Lots of the Anthem Country Club community. Only ACCCA approved plants are allowed on the Lot. This includes potted plants. It is suggested that homeowners research their plant material choices so that the right plant is sited in appropriate locations. Size, light and water requirements, as well as physical qualities of the desired plant such as spines, sharp tips, allergens, amount of litter and plant parts that are unhealthy to people and pets need to be considerations. Palm and citrus plants and trees are prohibited.

Additional plants are available for use in the rear yard of homes in the Anthem Country Club community.

*Indicates Firewise Plants: Anthem was named a Firewise Community by the National Firewise Community/USA in 2010. Firewise plants are more fire resistant as they maintain a high-moisture content, low resin content, grow slowly and do not need frequent pruning. The use of Firewise plants is recommended.

Plant Key: A - Accent Plants (includes cactus and succulents); GC - Groundcover; S-Shrubs; T-Trees

Accent Plants: Accent plants are intended to create points of interest in the front and rear yard. Utilize a limited variety of plants in small groupings or clusters to create a unique focal point in the landscape. Random, scattered, free-standing plants are not recommended; using clusters of accent plants with boulders, berms and trees is recommended.
